

Plants in the park

by Decho Pitukcharoen

Inspiration

INTO THE WILD MOVIE

I'm so scared with poisonous plant scene that makes the main character very sick since he eats the wrong one.

I have had this experience before. When I was young, I ate mushroom but I didn't cook it very well. Afterthat, I puked a lot and I had to go to the hospital.

Poisonous plants and cooking is the main reason that I want to create this app.

Concept

Plants in the park

Plants in the park aims to educate people who live in different cities to know about edible or poisonous plants in your local parks.

User can learn how to prepare and discover new plants in their local areas. (In this case, Central Park, New York).

Audience

Vegans, Healthy people or students and New Yorkers (In this case)

Plants In The Park / App Map

Plants In The Park / Wireframe

01
Home Screen

First screen with logo

02
Checking your Location

It detects what park you are at by using GPS system

02.1.1
