

DEVELOPMENT BASICS

Xcode, Apple's IDE (integrated development environment)- a computer programming program

```

Jogr > iPhone Retina (4-inch 64-bit) Build Jogr: Succeeded | Today at 1:06 PM No Issues
Jogr > Jogr Source > Controller > RunViewController.m > M -timeStringForInterval:
- (id)initWithNibName:(NSString *)nibNameOrNil bundle:(NSBundle *)nibBundleOrNil
{
    if ((self = [super initWithNibName:nibNameOrNil bundle:nibBundleOrNil])) {
        return self;
    }
}

- (void)viewDidLoad
{
    [super viewDidLoad];
}

- (void)didReceiveMemoryWarning
{
    [super didReceiveMemoryWarning];
}

- (void)viewWillAppear:(BOOL)animated
{
    if (!_timer || !_pause) {
        [self pauseOrRun:self];
    }
}

- (NSString *)timeStringForInterval:(NSTimeInterval)interval
{
    long hours = (long)interval / 60L;
    long minutes = ((long)interval / 60L) % 60L;
    long seconds = (long)interval % 60L;
    long hundredths = (long)(interval * 100.0) % 100L;

    return [NSString stringWithFormat:@"%02ld:%02ld:%02ld.%02ld", hours, minutes, seconds, hundredths];
}

- (void)updateTime
{
    if (_timer) {
        NSDate *now = _pause ? _pause : [NSDate timeIntervalSinceReferenceDate];
        NSString *string = [self timeStringForInterval:now - _start];

        [_timeLabel setText:string];
    }
}

- (IBAction)pauseOrRun:(id)sender
{
    if (_start == 0) {
        _start = [NSDate timeIntervalSinceReferenceDate];
    }

    if (_timer == nil) {
        _pause = 0;
        _timer = [NSTimer scheduledTimerWithTimeInterval:0.025 target:self selector:@selector
            (updateTime) userInfo:nil repeats:YES];
        [_timer fire];
        [_pauseRunButton setTitle:@"Pause" forState:UIControlStateNormal];
    } else {
        _pause = [NSDate timeIntervalSinceReferenceDate];
        [_timer invalidate];
        _timer = nil;
        [_pauseRunButton setTitle:@"Continue" forState:UIControlStateNormal];
    }
}

Objective-C

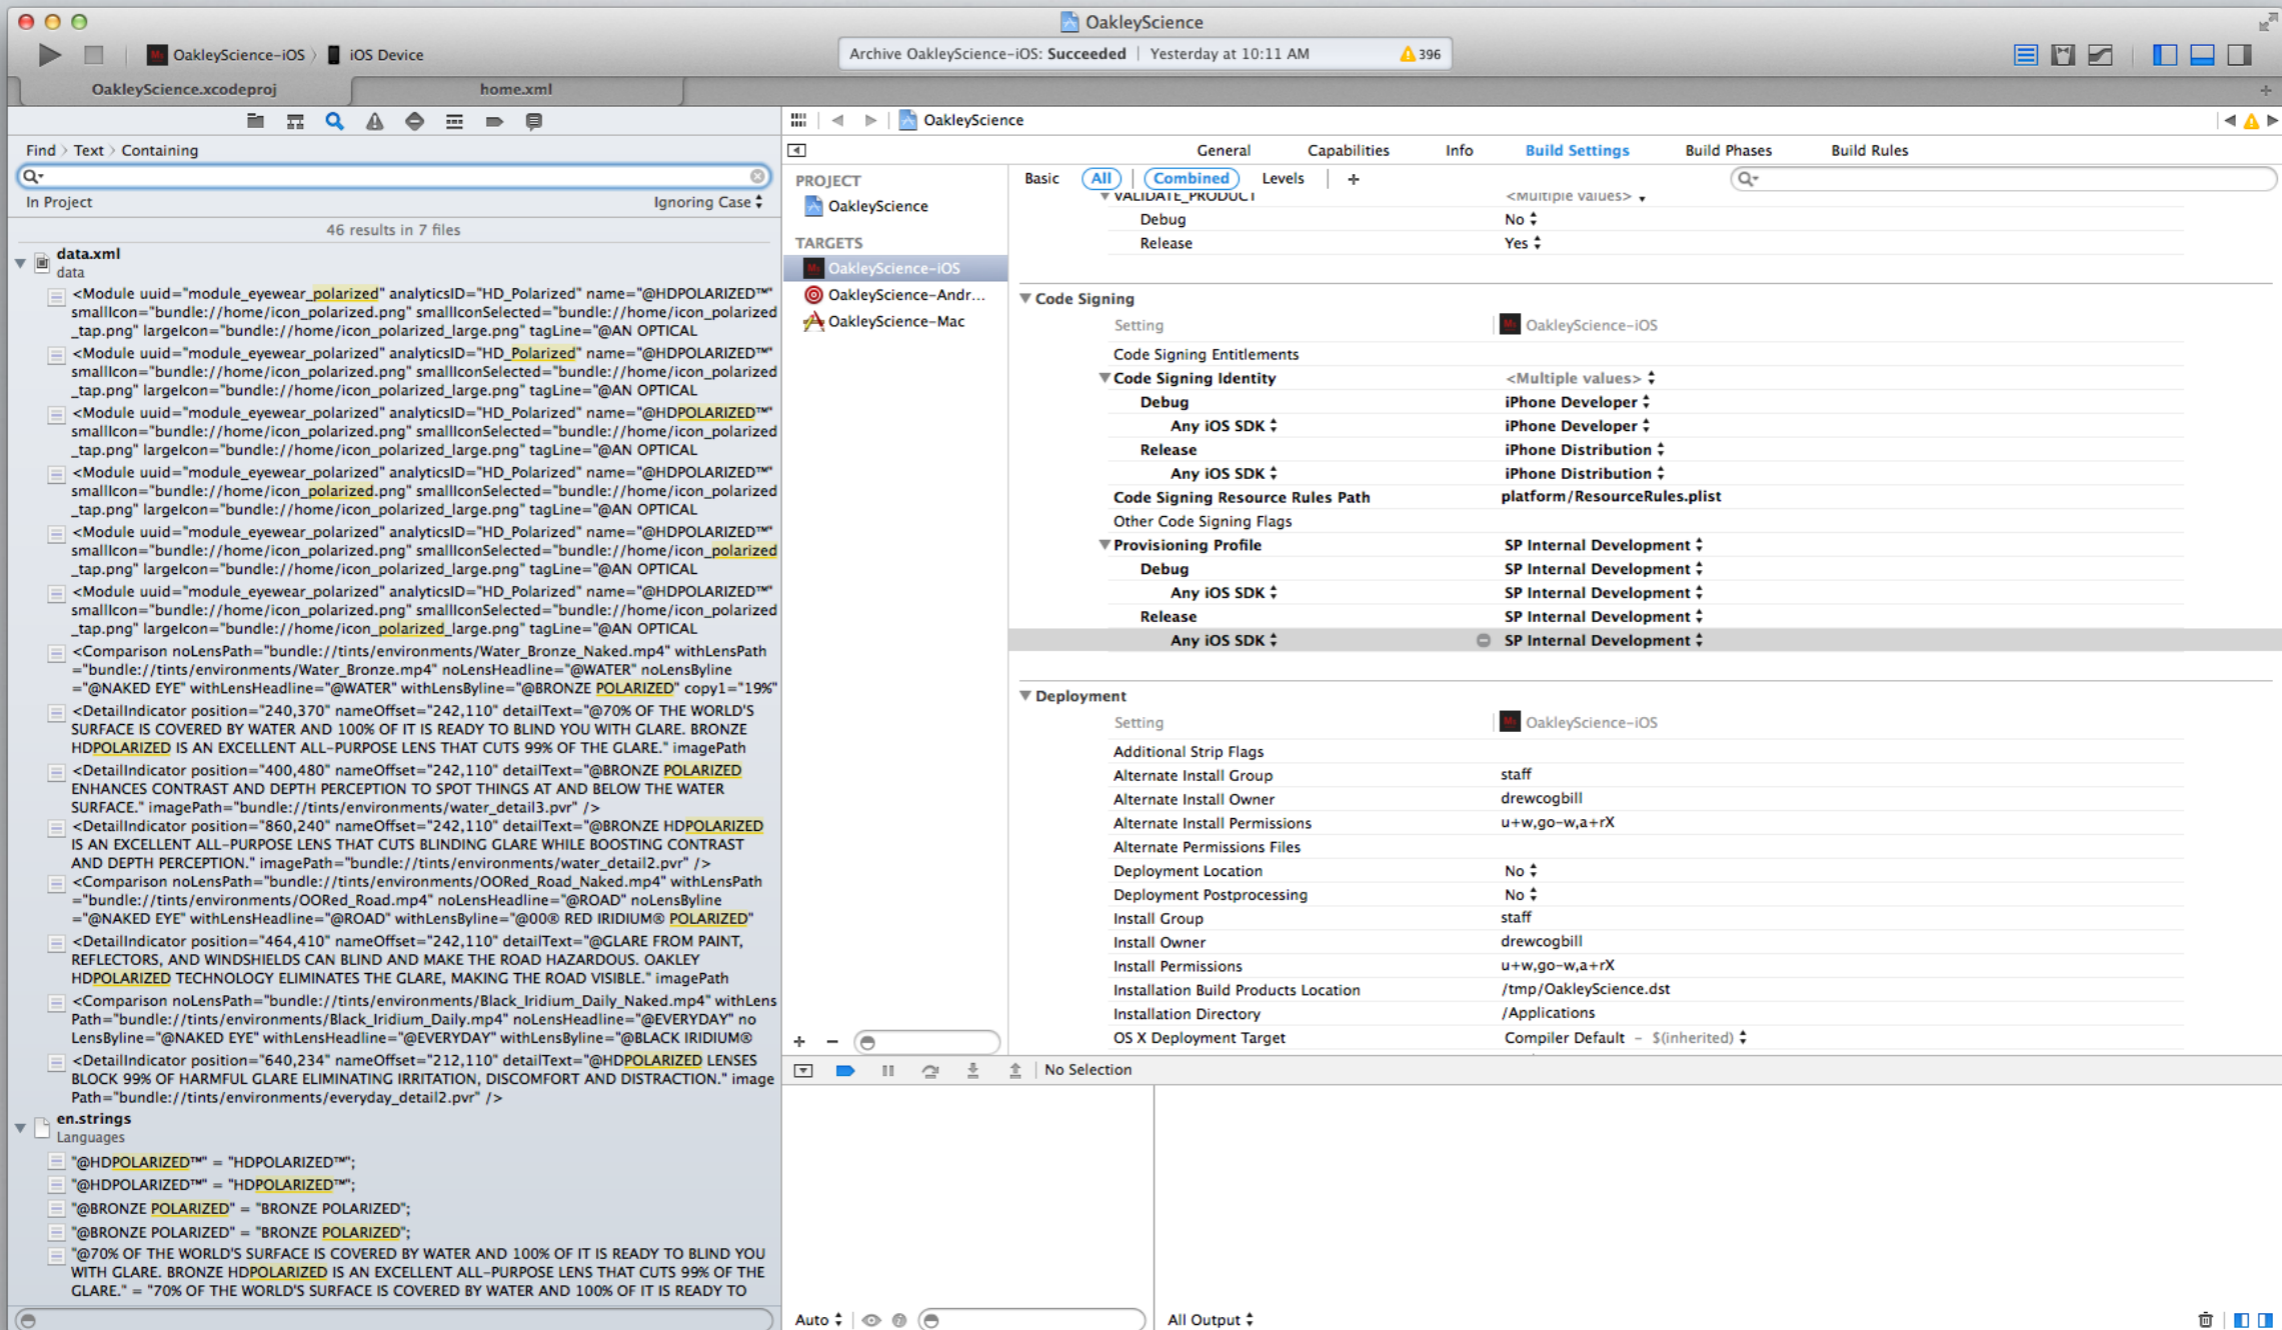

Interface Builder

Debugging, Instruments, building to simulators

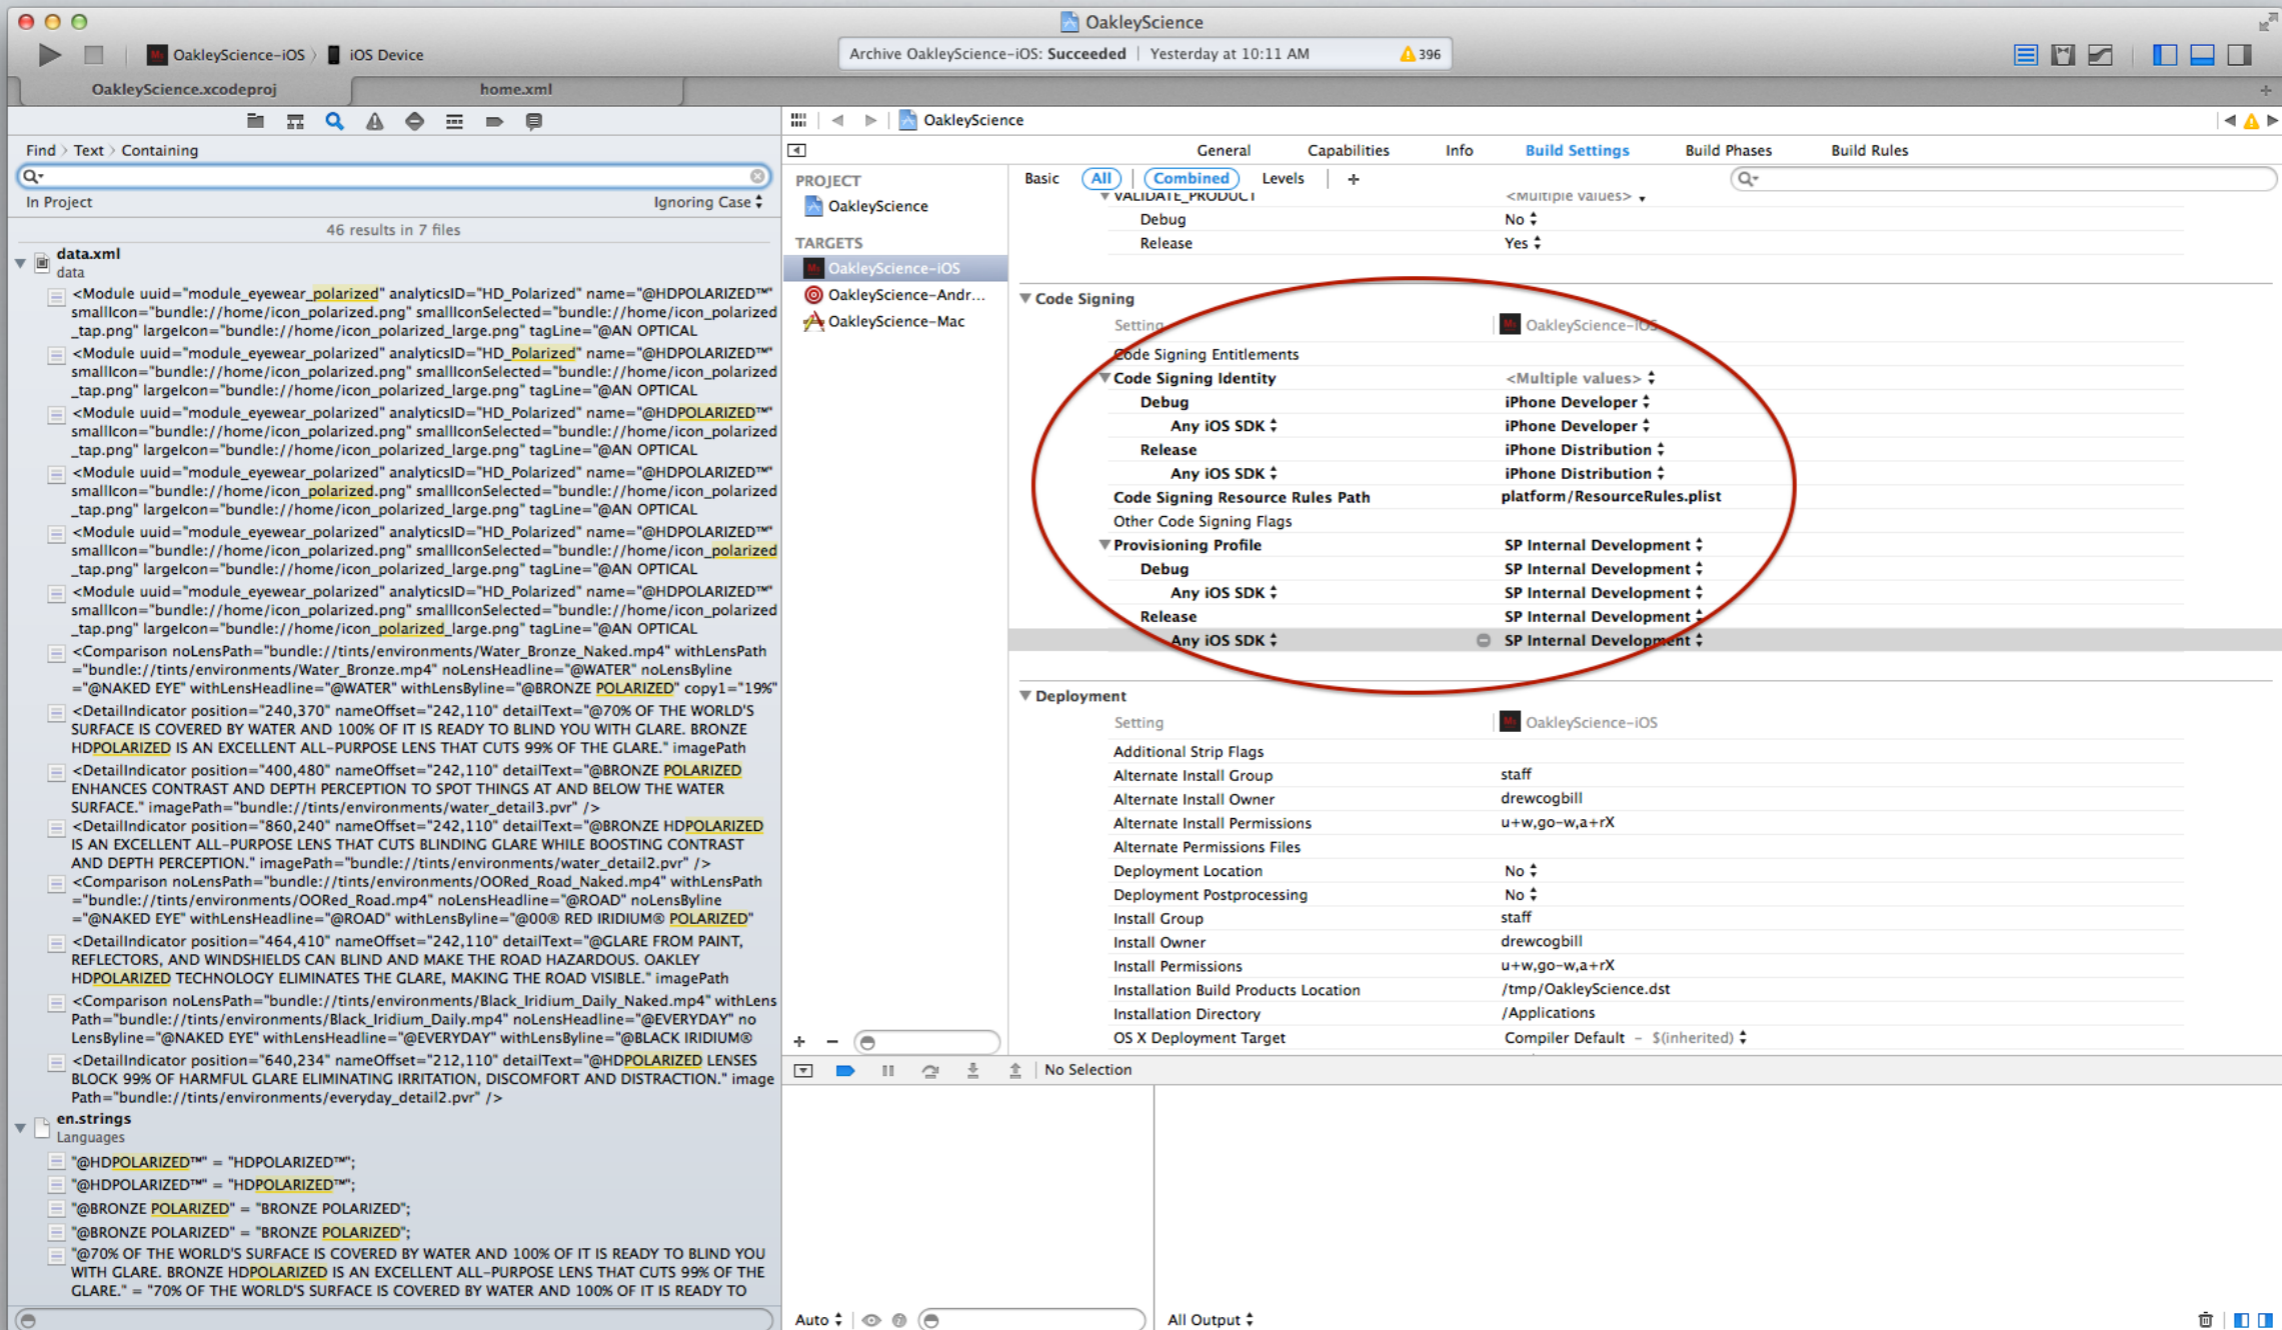

Just push play

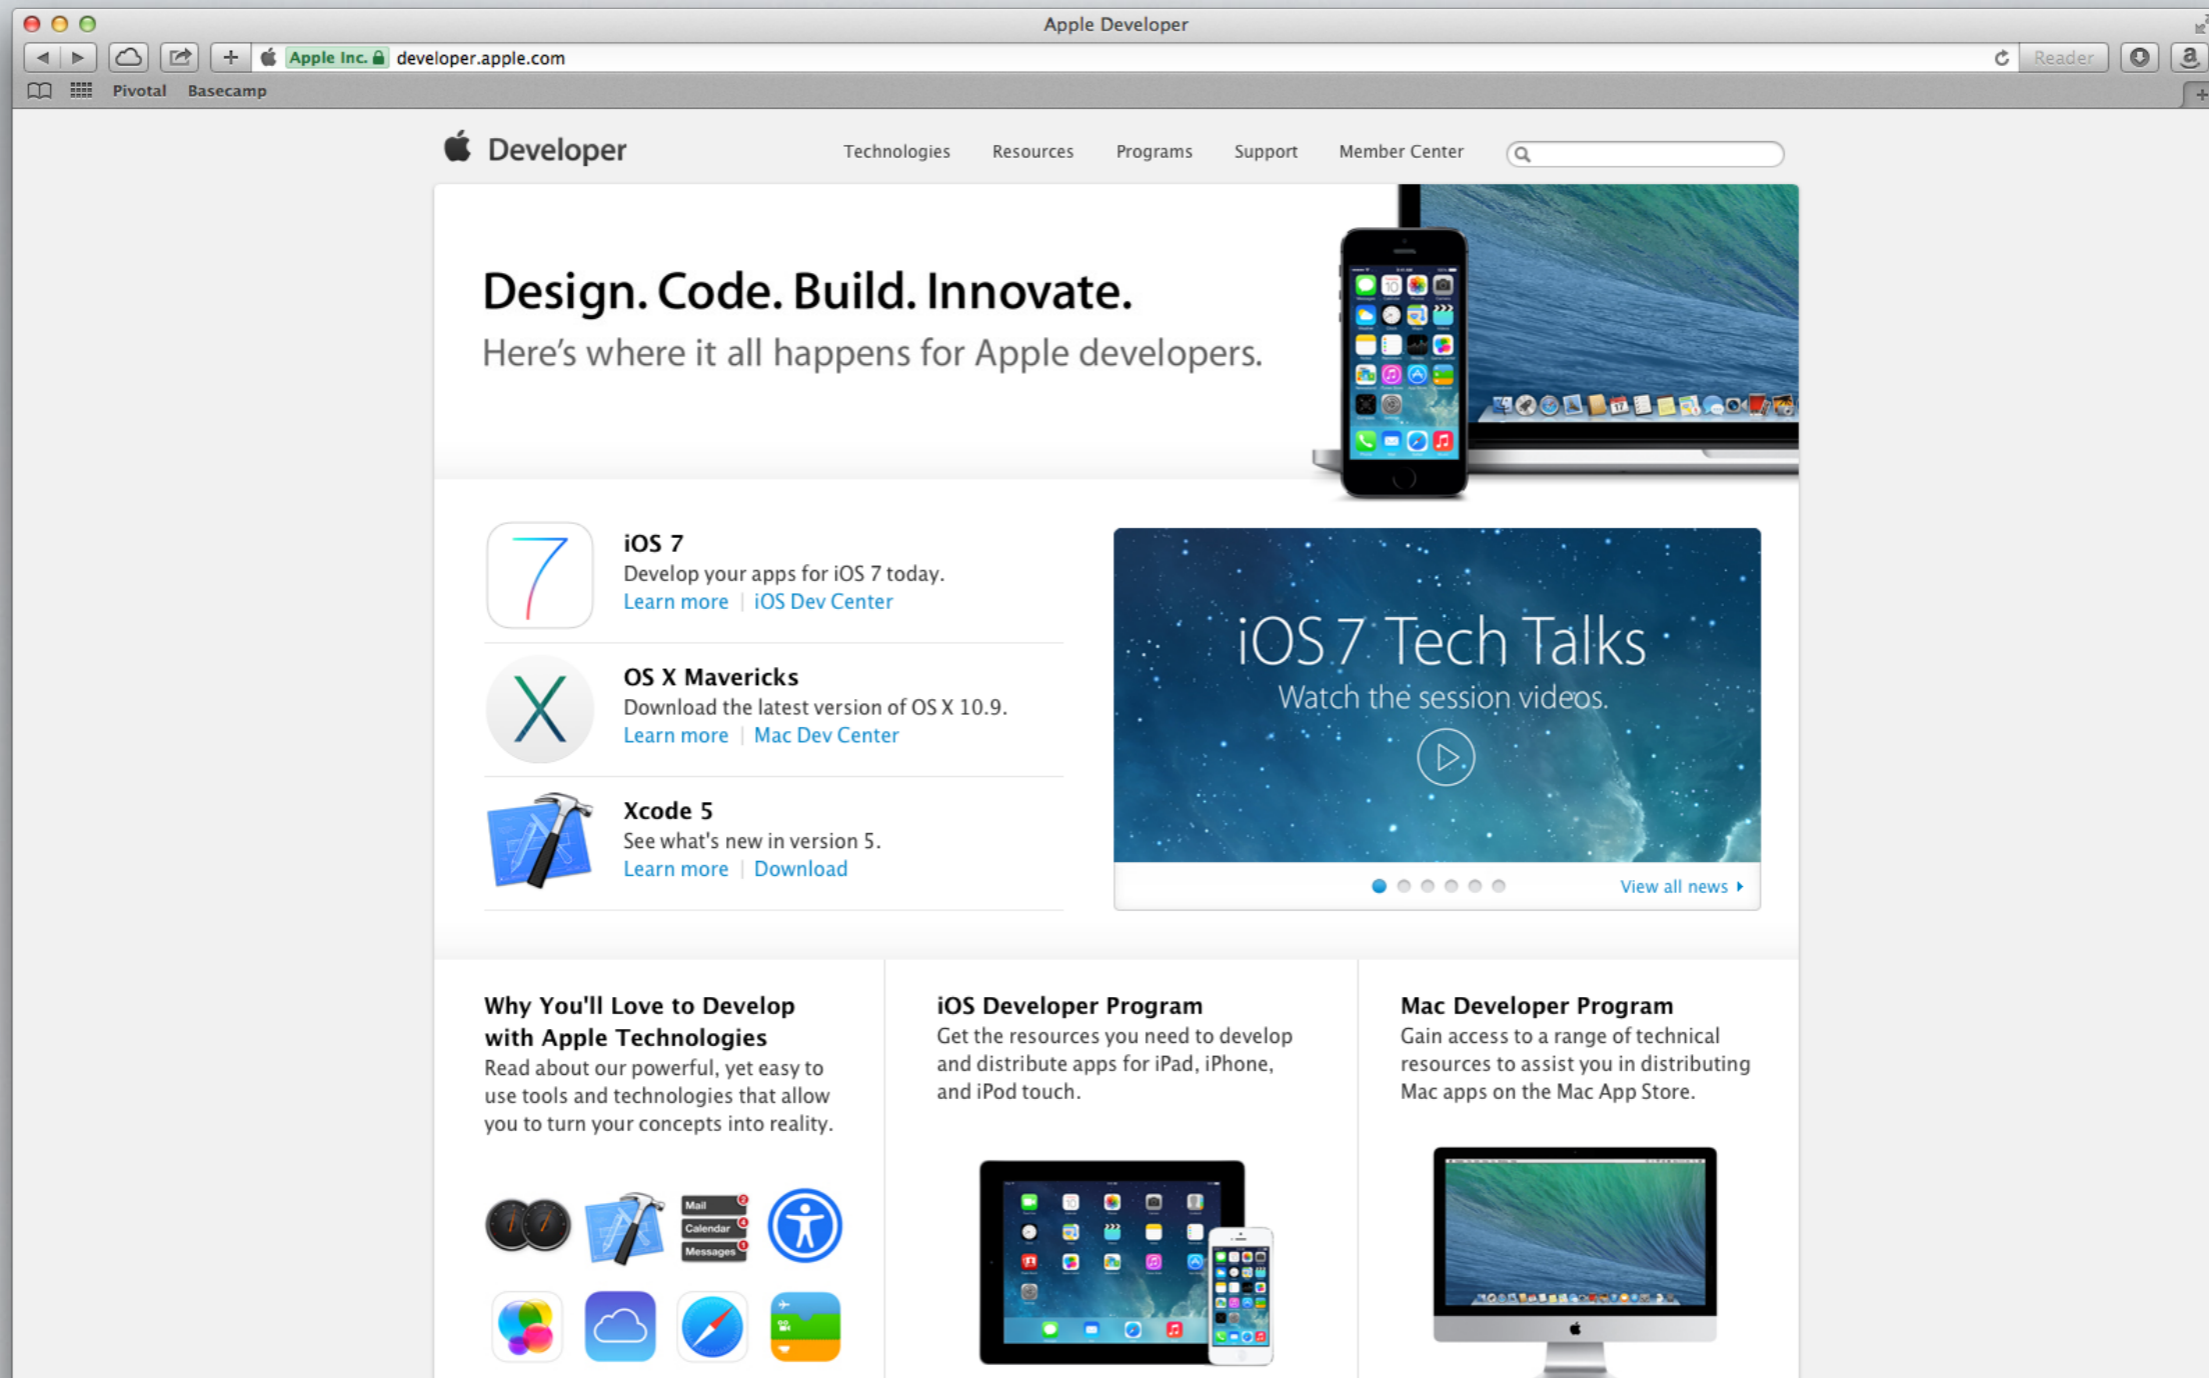

Other useful bits: left column tabs, searching, errors/warnings

ALSO

- If your app connects to the internet, that's a whole other can of worms. You'll need a server and such.

Provisioning (the manual way)

<http://developer.apple.com> - free to register, \$100 for a year to publish

Member Center - Apple Developer

developer.apple.com/membercenter/index.action

IOS PROVISIONING

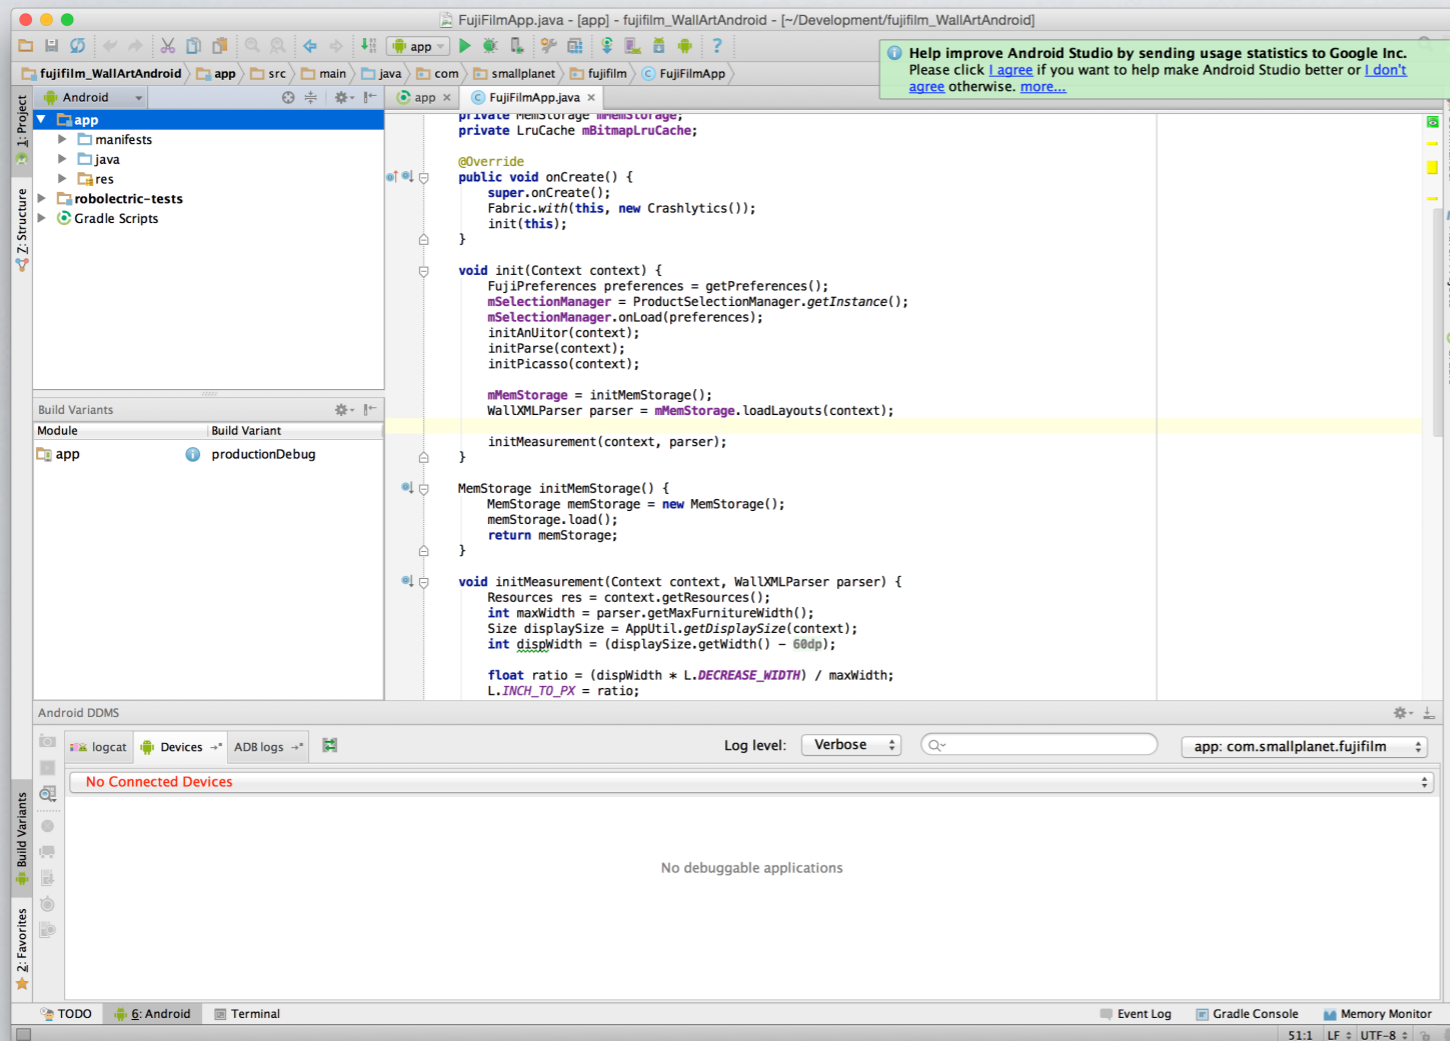

- Key needed for
- Certificate needed for
- Profile (which allows certain devices to run a certain app)
- iOS apps are .ipa's

PROVISIONING

- Profiles can mostly be wildcarded * (unless they need IAP, data protection, etc.)
- All app store apps have a unique **bundle identifier** - e.g. com.appco.appyapp

OTHER USEFUL THINGS

Android Studio

ANDROID PROVISIONING

- Anything anywhere!
- Android apps are generally .apk's (and .obb's)

SOURCE CONTROL

- Subversion (svn) - a centralized versioning system
- Git - a distributed versioning system (github)

SUGGESTED TOOLS

PROCESS: AGILE

- Individuals and interactions over processes and tools
- Working software over comprehensive documentation
- Customer collaboration over contract negotiation
- Responding to change over following a plan

PROCESS: AGILE

- Scrum
- Standups
- Scrum master, product owner/manager
- Pivotal Tracker

PROCESS: AGILE
